**Project:** Develop a detailed synopsis report over number systems principally concentrating on Binary, Octal, Decimal and Hexa-Decimal Number System.

Your report should focus on the:

- Base and contents/elements of each number system
- Methods and procedures for converting each number system from and to another number system.
- Application and area of use of each number system.
- Which number system would you prefer for digital and which one for manual calculation.
- Convert first 500 Decimal numbers Binary, Octal and Hexa-decimal in a tabular form i.e.

Decimal	Binary	Octal	Hexa-Decimal
1	01	01	01
.	.	.	.
500	111110100	764	1F4

In the light of Binary, Octal and Hexa-Decimal Number systems; propose your own number system; select a logical name for your number system; research on the base and contents of your proposed number system; present mathematical Axioms for converting your proposed number system from & to Binary, Octal, Decimal and Hexa-Decimal Number System and vice versa. Learn and Prepare Lesson # 5, 6 and 9 from the covered syllabus.
